PROFESSIONAL PROFILE

AI Developer with a background in Marketing & Market Research and an MSc in Data Science & AI. I connect business vision with technology on three fronts: the website as a purchase funnel, tools that bring order to information, and quality control of what AI produces. My philosophy: being efficient beats being merely effective.

PROFESSIONAL VALUE

- **Web & e-commerce management.** Design, product grids, features and content for online stores, treating every page as a step in the funnel that takes the customer to the order.
- **Tools that connect information.** I build tools that bridge scattered information sources and make any piece of data instantly findable, and I connect them to other tools to create networks of resources that are more autonomous and easier to use.
- **AI judge.** I know what to ask AI for, how to ask it and how to check whether it got it right: I assess every result, catch errors (including silent ones), avoid loops, discard answers based on wrong assumptions and correct course when needed.

PROFESSIONAL EXPERIENCE

AI Developer · Grupo Pamplung

May 2026 — Present

AI Department · Seville

- **Online store management:** design and modernization of the website (home page, navigation, listings and product page) across several countries and languages.
- **Product grids & catalogue:** grids organized with sales and stock data, plus product setup and upkeep.
- **Purchase features:** new features and fixes for the issues that held back orders.
- **Campaigns & publishing:** site-wide multilingual campaigns, with every change tested before going live.
- **Internal tools:** turned the work of three people into the work of one and cut task time to 10% of the original.
- **Centralized information libraries:** replace scattered information with an organized, up-to-date system and prevent the information chaos typical of companies that have not modernized their information systems.
- **Group's main website (in progress):** redesign of its public-facing side and its internal management.
- Configuration and customization of Claude / Claude Code (environments, permissions, hooks and MCP integrations) and creation of AI *skills* and *agents* to automate internal processes.
- Data analysis to support decision-making.

Freelance · AI Automation

Sep 2025 — Present

Own projects · Local SMEs

- Development of n8n workflows and AI integrations to automate administrative and lead-generation processes in small businesses.
- Stack: n8n, OpenAI APIs, databases, scraping, servers and domains.

Marketing Coordinator · Events

Nov 2024 — Jan 2025

San Silvestre Sevilla · Acquisition strategy

- Doubled the results of the original plan by efficiently reallocating the budget.
- Reduced the total cost of the event while keeping the commercial objectives.

University Internship · Traiana

Jan 2024 — Jul 2024

Sevillian craft brewery · Brand launch

- Took on cross-functional roles in a two-person startup: cold-door sales, supplier contact, pricing theory, accounting and social media.
- Designed and maintained the online store and brand image from scratch, with geo-local positioning around the Triana neighborhood.
- Built the wholesale price from cost analysis to pricing strategy for the hospitality channel.

Hospitality · Seville

- Kitchen and front-of-house work that showed me first-hand what it means to perform under heavy pressure and in tougher environments: demand peaks, tight timings and direct customer contact.

EDUCATION

MSc in Data Science & Artificial Intelligence

Oct 2025 — 2026

Evolve · Completed

BSc in Marketing & Market Research

2021 — 2025

University of Seville · Specialization in Big Data

FEATURED PROJECTS

Generative AI & Automation

2025

A set of applied solutions solving real problems with generative AI: conversational agents in production on WhatsApp Business for SMEs, RAG systems with vector databases and persistent memory, and scraping/HTML-enrichment tools that replace hours of manual work with automated processes of seconds. Two highlights:

- **Personal RAG chatbot embedded in portfolio** — conversational assistant that answers recruiters' questions about my profile, with its own vector database and anonymous query logging.
- **Scraping & HTML enrichment tool** — pipeline that extracts online-store HTML, analyzes it and enriches it with structured data, replacing an hours-long manual process.

Stack: n8n · OpenAI · Gemini · LangGraph · LangChain · ChromaDB · Supabase · Streamlit · Python · WhatsApp Cloud API · Whisper · Redis · PostgreSQL

Applied Data Science & Machine Learning

2025

End-to-end pipelines on real datasets: retail loyalty and repurchase model, NLP review analysis with sentiment and competitive benchmarking, and applied-statistics projects with models implemented *from scratch*.

Stack: Python · scikit-learn · NumPy · Pandas · NLP · statsmodels

B2C Fashion Brand Launch

Summer 2025

Fashion brand project taken from idea to the final production stage: market research, prototyping, supplier sourcing and negotiation, and investor and point-of-sale acquisition.

TECH STACK

AI & automation: Claude / Claude Code · Skills · Agents · n8n · OpenAI · LangGraph · LangChain · Cursor · RAG · Prompt Engineering

Data analysis: Python · SQL · Power BI · Excel · R · SPSS · scikit-learn · Statistics

Web & e-commerce: Shopify · HTML/CSS · Web design · UX/UI · Catalogue & grid management · Conversion funnels · Multilingual e-commerce

Marketing & business: SWOT · BCG · Market research · Branding

Design: Canva · Photoshop · CapCut · PowerPoint

SKILLS & LANGUAGES

AI judge: knowing what to ask, how to ask it, and whether the result is correct.

Creative problem-solving: reallocating resources to achieve more with less.

Digital autonomy: end-to-end digital projects without support.

Adaptability: fast pivots when the market or competition changes.

Working under pressure: tight timings and heavy load (kitchen and front-of-house).

Communication & persuasion: defending ideas, negotiating and presenting.
